

# TATTOO AFTERCARE INSTRUCTIONS

FOLLOW THESE INSTRUCTIONS CAREFULLY TO ENSURE YOUR  
TATTOO HEALS PROPERLY

Leave bandage on for no more than 1½ hours. remove bandage gently and wash tattoo with unscented antibacterial soap and warm water. Let tattoo air dry for about 10 minutes. Apply a thin layer of Aquaphor - over application of ointment is the main cause of healing problems. Do not rebandage your tattoo.

Follow these instructions 2-3 times a day for no less than 5 days. You will eventually start to see your tattoo get flakey and peel, this is normal. **Do not** pick at or scratch your tattoo. If it is itchy, gently slap it with a clean hand. Once your tattoo is healed to the point of having no more “open” areas, you can switch from aquaphor to unscented lotion.

**Do not** submerge your tattoo in water while it is healing. This includes hot tubs, baths, fresh water and chlorinated pools. Keep your new tattoo out of the sun for at least 3 weeks. After it heals, be sure to use sunscreen to ensure the life and vibrancy of your tattoo. Avoid tight fitting clothing while your tattoo heals.

If a touch up is required due to the client's neglect during healing, it will be performed at the client's expense.
